

Geographic Spread

South Carolina reported widespread activity this week. This is the eleventh consecutive week at widespread activity.

Influenza Activity

Overall, there was a decrease in influenza activity this week.

Regional Influenza Activity

Decrease

Virologic Surveillance

This week there were **352** lab-confirmed tests reported. Influenza A was most frequently reported. In the current flu season, there have been **3674** lab-confirmed tests reported.

Influenza-Like Illness Surveillance

The percent of patient visits to sentinel providers for an influenza-like illness (ILI) was 5.9%, which is above South Carolina's baseline (3.53%). The ILI activity level overall was **high**.

Influenza-Associated Hospitalizations

This week 194 influenza-associated hospitalizations were reported by 64 hospitals. The cumulative hospitalization rate is 40.4 per 100,000. In the current flu season, there have been 2034 influenza-associated hospitalizations.

Influenza-Associated Deaths

This week 11 influenza-associated deaths were reported; however, 6 deaths occurred during previous weeks. The cumulative mortality rate is 1.3 per 100,000. In the current flu season, there have been 63 influenza-associated deaths.

Influenza-Like Illness Surveillance

This week, the ILI activity level was **high** and 5.9% of patient visits to SC ILINet providers was attributed to an influenza-like illness. This is above the state baseline, 3.53%.

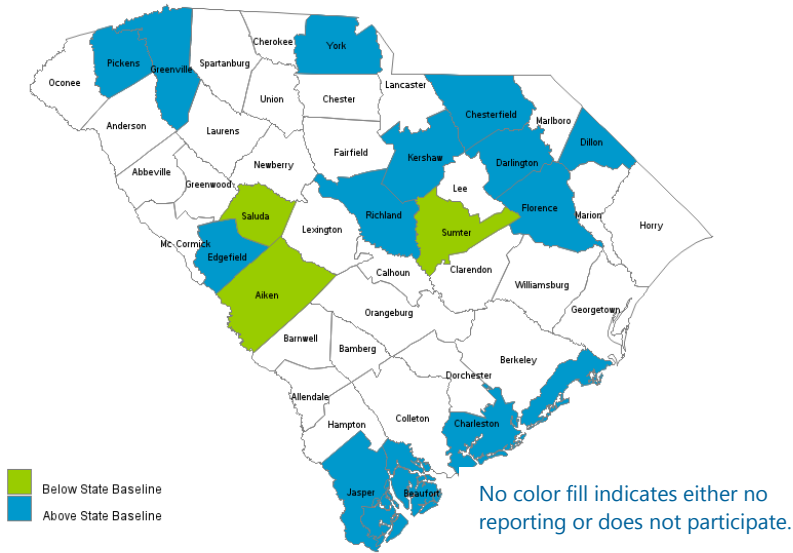

Reports were received from providers in 16 counties, representing all DHEC Public Health regions.

ILI percentage is dependent upon the number of reporting providers and/or can vary by disease activity or the number of providers submitting reports.

Percentage of Influenza-like Illness (ILI) Visits Reported by Sentinel Providers for Past and Current Seasons
