

Ordering Pediatric COVID-19 Vaccine

Please use these steps (below) for ordering pediatric vaccine in VAMS:

1. Login to [VAMS](#)
2. Navigate to Inventory tab
3. Select dropdown arrow for Inventory Request
4. Select New Request button
5. Search product and select correct VID number
 - a. Pediatric Pfizer vaccine (ages 5 to 11)
 - i. VID-00000028
 - ii. VID-00000029

(Providers can choose either VID number for the specific product in reference to the chart.)

The attached document contains a chart for the corresponding VID numbers for all products in VAMS.

Booster Interval for Moderately to Severely Immunocompromised Individuals

The CDC has updated their guidance for moderately or severely immunocompromised people. This includes:

- The interval between completion of the mRNA vaccine primary series and the booster dose has been shortened. The new interval is at least 3 months (instead of 5 months).
- Those who received the Janssen COVID-19 Vaccine primary series should receive an additional dose and a booster dose, for a total of 3 doses to be up to date.
- For those who are immunocompromised and initially received a Janssen vaccine, should Janssen no longer be available, an mRNA-based vaccine is preferred for the additional dose, 4 weeks later, as well as the booster dose 2 months after the additional dose.

Updated COVID-19 Vaccination Interval Guidance

Please follow this link to find updated [COVID-19 vaccination guidance](#) with additional information to help vaccine providers determine the optimal interval between the first and second dose of an mRNA vaccine series, based on the individual patient.

Please send questions to COVIDVaccines@dhec.sc.gov.
